EDUCATION

PMAS Arid University

Bachelor of Science in Software Engineering

Lahore, Punjab

Oct. 2023 – Present

Superior College Piplan

Intermediate in Computer Science

Mianwali

Sep. 2021 – June 2023

EXPERIENCE

Full-Stack / Backend Developer

July 2025 – Present

IT KUMAIL

Lahore, Punjab

- Architecting and maintaining scalable backend services using TypeScript and Node.js, implementing clean architecture principles to ensure long-term maintainability.
- Designing and developing high-performance RESTful and GraphQL APIs with secure authentication, handling complex business logic and asynchronous workflows for SaaS applications.
- Leading PostgreSQL database management, including complex schema design, relationship mapping, and indexing strategies to optimize query performance at scale.
- Integrating automated payment systems via Stripe and PayPal, managing subscription lifecycles, webhooks, and secure transaction retries to minimize failure scenarios.
- Building and deploying AI-driven pipelines (RAG, Embeddings) using OpenAI services to power intelligent features within production-grade web systems.
- Improving overall system reliability by implementing background jobs, concurrency handling, and real-time monitoring of server health and API response times.

WordPress & Systems Developer (Remote)

July 2025 – Present

IT KUMAIL

Lahore, Punjab

- Optimizing large-scale web applications for Core Web Vitals, achieving high Lighthouse scores through advanced caching strategies and render-blocking resolution.
- Customizing PHP backend logic and integrating third-party APIs to extend functionality, ensuring seamless synchronization between external CRM tools and internal databases.
- Developing interactive UI components using React.js and GSAP, while ensuring high backend performance through server-side optimizations.

Mobile App Developer (Freelance)

2024 – Present

Self-Initiated Projects

- Designed and developed a fully functional Trading App with real-time market data integration, interactive candlestick/line charting, portfolio tracking, and buy/sell order simulation using Flutter and Dart.
- Implemented REST API integration with financial data providers to stream live stock and crypto prices, with persistent local storage using SQLite for trade history and watchlists.
- Built multiple small-scale mobile Gaming Apps featuring game logic, score tracking, animated UI, and smooth state management — deployed and tested on Android devices.
- Applied clean architecture patterns (MVVM) across mobile projects, ensuring modular and testable codebases with responsive layouts for different screen sizes.
- Managed app lifecycle, performance optimization, and cross-platform UI consistency using Flutter widgets and custom animations.

PROJECTS

AI-Driven SaaS Ecosystem | TypeScript, Node.js, PostgreSQL, OpenAI, n8n

Oct. 2025 – Present

- Developed a comprehensive SaaS backend that automates complex workflows using n8n and custom AI behavior via OpenAI and Gemini API.
- Implemented a vector-based retrieval system for a chatbot, improving contextual accuracy for festival-based client data handling.
- Built a secure Shopify CRM integration to synchronize product catalogs and user accounts in real-time via REST APIs.

AI Content Humanizer Tool | Next.js, Node.js, PostgreSQL, AI Detection APIs

April 2026 – Present

- Architected a tool for identifying and humanizing AI-generated text, utilizing a robust PostgreSQL backend for data persistence and user analytics.
- Designed a clean API layer to handle high-volume text processing requests with efficient error handling and rate limiting.

Trading Mobile Application | Flutter, Dart, REST APIs, SQLite

2024 – Present

- Built an end-to-end mobile trading app with real-time candlestick charting, watchlist management, and simulated order execution.
- Integrated live financial data APIs for crypto and stock markets, with local caching and offline support for seamless user experience.

Mobile Gaming Apps (Collection) | *Flutter, Dart, Animations, State Management*

2024 – Present

- Developed a series of casual mobile games including puzzle, arcade, and quiz formats with engaging UI animations and score-tracking systems.
- Focused on smooth frame rates, responsive touch handling, and clean state management using Provider and Riverpod.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL (PostgreSQL), PHP, Python, Dart, HTML/CSS

Backend & Frameworks: Node.js, Express, NestJS, Next.js, React, Tailwind CSS, REST & GraphQL APIs

Mobile Development: Flutter, Dart, Android SDK, MVVM Architecture, Provider, Riverpod, SQLite, Flutter Animations

Cloud & Databases: PostgreSQL, MongoDB, Vector Databases, SQLite, Stripe Integration, Webhooks, Docker

AI & Automation: OpenAI API, RAG Pipelines, Embeddings, n8n, OpenClaw Gateway, AI Chatbot Training, Gemini API

Tools & Performance: Git/GitHub, SEO Optimization, Lighthouse, Caching (Redis/WP), Core Web Vitals, GSAP

Languages (Spoken): English (Fluent/Professional), Urdu
